

Lami-Air™ EQ System

FACILITY: VA Medical Center | Minneapolis, MN
ARCHITECT: BWBR | St. Paul, MN
ENGINEER: Dunham Associates | Minneapolis, MN
IMAGING: SIEMENS Artis Q

HIGHLIGHTS

Completed in 2016, this system utilized stainless steel diffusers & fill-in panels with anodized aluminum framing matched to equipment rails. While the VA typically specifies all stainless steel, they welcomed the design recommendations by Precision Air Products resulting in a lighter, less expensive solution. Factory field supervision was utilized to ensure a timely and professional installation. This project involved an adjacent operating room with a Philips FlexMove imaging system and a Precision Air Products integrated ceiling system.
